Experiment 15: Design a Mobile Application Wireframe for Managing Ad Hoc Wireless Network Challenges Using Figma.

Aim: To design a mobile application wireframe in Figma that helps users monitor and manage challenges in ad hoc wireless networks.

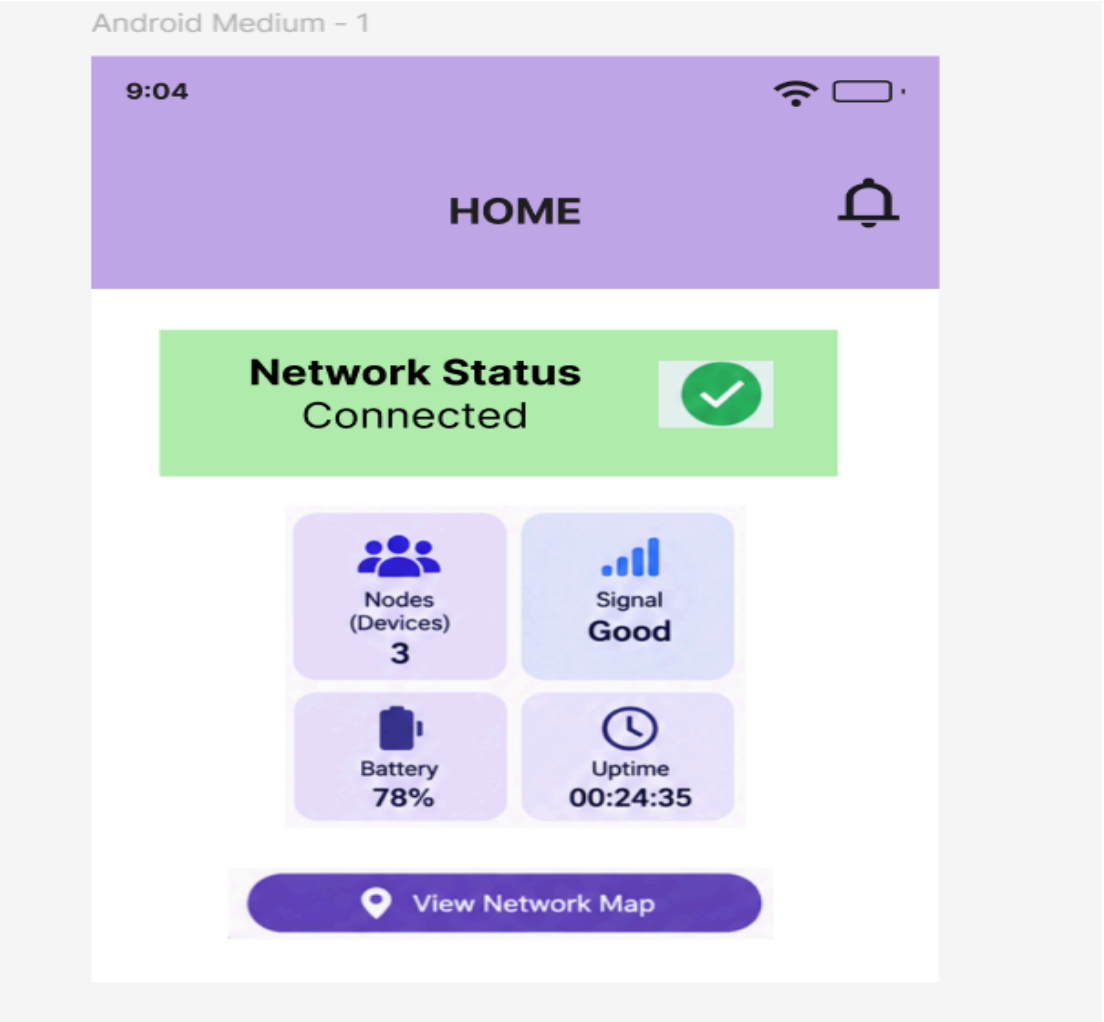

Procedure:

1. Open Figma and create a new mobile frame.
2. Design the home screen with the application name.
3. Create a dashboard showing network status and connected devices.
4. Design a network map to represent connections between devices.
5. Add a troubleshooting screen for weak signals and network disconnections.
6. Create settings and network alert screens.
7. Arrange all screens and use simple colors and icons.

Output:

Result: A mobile application wireframe was successfully designed in Figma to monitor network connections and identify common ad hoc wireless network challenges.
